

Learning Center

Design, Development, & Construction

McCASLIN ASSOCIATES designed a playful, yet artistic new day care facility for a client in a growing suburb of Dallas.

With simple geometric forms that inspire thought and play, this building captures light and encompasses a variety of spacial volumes with its ceiling heights.

A critical element of the design was to facilitate the care and management of the children by allowing multiple adults to supervise the same group of children simultaneously. Our approach to this special need combined the basics of an open floor plan with minimal separation to create a supportive learning environment. McCASLIN ASSOCIATES was both Architect and Construction Manager on this project.
